

Regular APK Generation

1. What is the need behind generation of Regular APK?

Regular APK is generated only when there are any client side code change which includes bug fixes and coding enhancements (basically an app upgrade).

2. Steps to generate Regular APK

1. Use the debug keystore provided by SAP.
2. Change the `SERVER_NAME` in IAppConstants.java as needed to point Production, Development environment.
3. Is any port change is needed when pointing to different servers.
4. Change `android:versionName` in AndroidManifest.xml

Logic behind naming Regular Apk

1.1.1113 – here 1113 represents November 13 (11/13). No change in 1.1, only the last four digits should be changed as per the current date.
